

RealAndVirtual.io (RNV)

We want to change how trade is done by allowing the people a chance to make a difference through their transactions.

Be part of the change, enjoy crypto trading while donating a percentage of earnings to help bring change in the world.

This whitepaper will explore the new world of cryptocurrency.

What is RealAndVirtual (RNV)?

The name comes from the idea that it's both **real** and **virtual** at the same time, meaning it's tangible and intangible at once.

It's also named after the companies' desire to be realistic about what's **important in life** - Reality and Virtuality.

The goal behind RealAndVirtual is to **create a currency that solves problems in our society** through innovation and technology for all people involved in transactions - from providers to clients - without discrimination or prejudice.

RealandVirtual is a new kind of Cryptocurrency that shares to holders 1% **of every transaction**, 8% to charity and 1% to the team - which is still less than what other cryptocurrencies charge.

The best thing about realandvirtual.io is that it doesn't take anything from traders, but it generates profit for yourself and charity at the same time.

This is the first ever charitable blockchain company that shares to holders and donates to charity.

We aim at **revolutionizing** the way people trade by enabling them to “trade while donating” **through fees**. For example, when a person trades on Exchange A, eight % of the transaction value in RNV coin will be donated to Charity A, one % will be sent to the holders and one % to the development team.

This is a really interesting project with an ambitious goal of changing how we look at trading from purely from financial factors into social factors as well.

How does it work?

You can trade crypto and donate at the same time!

Features section Crypto for a common good.:

Buy/Exchange/Trade while donating

RealAndVirtual (RNV) has a goal of raising funds for charities while providing traders with a chance to grow their wealth while making a positive contribution to the world.

With each Buy or Sell transaction, RealAndVirtual (RNV) will distribute:

- 1% of those transactions to all token holders directly in their wallet;
- 1% of those transactions to development team;
- 8% of those transactions to charity*.

*see "Donations plan" section.

Suppose a transaction of 1 billion tokens has been completed:

- 1% of 1 billion=10 Millions will be distributed among all the holders;
- 1% of 1 billion=10 Millions will be distributed among all the holders;
- 8% of 1 billion=80 Millions will be donated to charity foundations;
- 90% of 1 billion=900 Millions will be received by user.

Obviously, the value of the donations is related to the value of RNV token.

Donations plan

VARIABLE DONATIONS

3 to 12 donations will be sent each year causing relevant price variations (all 8% of fees will be donated in 3 to 12 times), the timing and number of donations is variable in order not to allow the predictability of events.

Donations are handled securely by the blockchain, meaning that all transactions are safe and can be easily verified. Transactions are instantaneous, cheap, and there are no third parties involved.

WHY JUST #CRYPTOGIVINGTUESDAY & #BAGSEASON?

We were inspired by #CryptoGivingTuesday:

#CryptoGivingTuesday is the unofficial start of #BagSeason, the holiday/year-end giving season for the crypto community. It takes place annual on the Tuesday after the American holiday, Thanksgiving.

More information can be find here:

<https://www.savethechildren.org/us/ways-to-help/ways-to-give/ways-to-help/cryptocurrency-donation>

How to Buy:

- Setup a wallet that supports **Binance Smart Chain (BSC)**, BEP20 tokens. Wallets are available both on desktop computers and on smartphone devices. You'll need to choose the wallet that fits your needs best.
- Buy/exchange the desire amount of BEP20 tokens you want to swap.
- Connect your wallet with decentralized exchanges on Binance Smart Chain (BSC) and you're good to go!
- **Important! Set up the trading fee to 10%**
- Once the transaction is confirmed you can find your RNV in your wallet (please activate the RNV token on your wallet providing the updated token address shown on homepage of website <https://realandvirtual.io>)

The updated token address is, and will ALWAYS AND **ONLY** be shown on the homepage of the website <https://realandvirtual.io>.

Plans for the future

In the first year of activity we want to update the site, adding an app that makes it possible to carry out surveys, participating through RNV token staking.

Staking will have a fixed amount of RNV token minimum fee in order to:

- Participate (means at least one transaction for each voting participant)
- Increase the number of RNV tokens staked for votation and have a x2 weight on voting.

Example*:

- Voting for “X Cause” choosing A or B option.
- Voting user equals to 1 user.
- Stake and participation fee is 10 RNV per user.
- Minimum amount stake of 100 RNV Tokens.
- Stake and participation fee with “x2 value opinion” is 100 RNV per user and minimum amount stake is 1000 RNV.
- At the end of votation (30-60... days) the winning option (A or B) is public declared on official website and official social networks.
- The addresses of the users losing the voting will have back all the tokens staked, but not the participation fee.
- The winner’s addresses will have back all the tokens staked, the participation fee of 10 RNV and the remaining of “losers” participation fee of about 5 RNV (by each loser voting) and 50 RNV (by each loser voting with “x2 value opinion”) divided for all the winning users at the voting event.
- There will be no privileges by participating with “x2 value opinion” but having, as said, double weight opinion, so 2 votes (for the same option A or B).

Example of staking for a user:

Voting for A or B	Amount of stake	Total users staking for A	Total users staking for B	Amount of fees payed by stakers B
fee 10 RNV	100 RNV	10000 users	7200 users	$7200 \times 10 \text{RNV} = 72000 \text{ RNV}$

Option A wins, so:

Total fees payed by B	50% to the winners A	40% donations	10% marketing and team
72000 RNV	36000 RNV	28800 RNV	7200 RNV

TOTAL AMOUNT SENT BACK TO USER VOTING A

$36000 \text{ RNV} / 10000 \text{ users} = 3,6 \text{ RNV}$

$100 \text{ RNV staked} + \text{Fee } 10 \text{ RNV} + 3,6 \text{ RNV} = \underline{\underline{113,6 \text{ RNV}}}$

TOTAL AMOUNT SENT BACK TO USER VOTING B

100 RNV staked

10 RNV lost if voting goes wrong

TOTAL AMOUNT DONATED

28800 RNV

*Numbers and fees amount may vary in the future.
